

Skunk Bath

Mix:

Quart of hydrogen peroxide

¼ cup baking soda

1 tsp Dawn liquid dish soap (blue color)

apply to your dog and let sit no longer than 10 minutes as the hydrogen peroxide can bleach out the color of your pets fur

And then...

If your pet was sprayed in the face, saturate a washcloth with the same stuff you're using as a bath and wipe the area down avoiding the eyes, nose, ears and mouth. The eyes should be rinsed with an eyewash (available here) or a contact lense saline solution.

Skunk odor lingers for a long time. Bathe your pet ASAP so the smell doesn't have a chance to linger in your house as well (months from now, don't be surprised if the skunk smell returns each time your pet gets wet).

And remember, this is best done at home. The lingering smell will stay in your car.
